

# HM Pallet Labelling

# HM Pallet Labelling - Complies with the EAN 128 Standard

## Technical specifications

---

HM's Pallet Labelling Stations are based on the principles of a 6" wide thermo/transfer printer with 300 Dpi dissolution.

---

The printer can print graphics such as company logo etc., all known bar code types and text onto the labels.

---

The printer has 9 built-in alphanumerical fonts, e.g., OCR-A, OCR-B and CG Triumvirate from Agfa. The printer can also print Windows text fonts.

By means of HM Labelling's automatic pallet labelling station, it has now become possible for you to automatically label pallet products with labels conforming to the EAN 128 Standard. This means that the station applies the labels at the two required corners of the pallet, whilst printing the relevant information and bar codes onto the labels, in keeping with the EAN 128 Standard.

---

## Advantages

- HM Labelling's Pallet Labelling Machine is a standard unit, which can be adapted to and built into any pallet line
- Optional inventory management and tracking of each pallet from you, as the producer, and all the way to the end-user by means of the EAN 128 pallet labelling standard, which provides each pallet with a unique number, an SSCC number.
